Next Phase of Growth

March 2010
This presentation may contain forward-looking statements that involve risks and uncertainties. Actual future performance, outcomes and results may differ materially from those expressed in forward-looking statements as a result of a number of risks, uncertainties and assumptions. Representative examples of these factors include (without limitation) general industry and economic conditions, interest rate trends, cost of capital and capital availability, availability of real estate properties, competition from other companies and venues for the sale/distribution of goods and services, shifts in customer demands, customers and partners, changes in operating expenses, including employee wages, benefits and training, governmental and public policy changes and the continued availability of financing in the amounts and the terms necessary to support future business. You are cautioned not to place undue reliance on these forward looking statements, which are based on current view of management on future events.

The China asset bubble debate

• What is an asset bubble?

“A bubble may be defined loosely as a sharp rise in the price of an asset or a range of assets in a continuous process, with the initial rise generating expectations of further rises and attracting new buyers – generally speculators interested in profits from trading in the asset rather than its use or earnings capacity”

Charles Kindleberger, MIT professor emeritus;
Author of Manias, Panics, and Crashes: A History of Financial Crises

• Is a bubble forming in China?
  – Prices have gone up as recent government stimulus resulted in huge increase in loans
    • Total loans of RMB 4.9 tr in 2008; almost doubled to RMB 9.58 tr by end 2009
  – National wide housing prices increased 25%, from RMB 3,578 psm in 2008 to RMB 4,474 psm at end of 2009
  – But affordability has also improved due to increase in household income growth and decline in mortgage rate
Historical nation-wide house price growth has been in line with income growth.

Chinese buyers have significant savings to fund house purchases

China’s household savings rate has been growing as income levels rise

Note: China’s household savings defined as (urban disposable income per capita – urban consumption expenditure per capita)
Source: Bloomberg and CEIC
China’s case is therefore different from the property bubble experiences of other countries

Unlike many developed nations during their respective crises, China’s household income growth still outpaced its house price growth

CapitaLand Presentation *March 2010*
Is there a property bubble in China?

- Present China’s property boom cannot be labeled as a bubble
- Current market conditions driven mainly by physical demand vs supply and loose credit conditions
- Some degree of speculative demand in the Tier I cities
- Prices will rise due to rapid economic expansion but when they inflate to level beyond affordability then banks will not lend
- Prices will then naturally deflate back to affordable level
- Unlike the US, there is no subprime danger
- Comforting to note that the Central government taking steps to rein in the market
  - We will be more worried if the government does nothing about it
Our outlook on property investment in China

• We are a long term investor in China
• Remain focused on demand fundamentals and be disciplined in our investment management
• Rapid urbanisation and the huge demand for housing will continue to underpin the market for a long time to come
• We won’t chase up land prices to add on to speculation
  – Prefer to walk away with peace of mind
• Acquisition of OODL - we did our home work and secured the deal at a price which is supportable by real market demand
• “Aggressive discipline approach”
Growing China Business

- Acquisition of Orient Overseas Developments (OODL) for US$2.2bn
  - Increases China’s asset size from 28% to 36% of total business
  - Excellent strategic fit. More than 87% of portfolio in Greater Shanghai
  - Portfolio mainly in city centre, next to/near MRT stations
  - Portfolio acquired at good values
  - Quick time to market
